

## APPSGATE

AppsGate is a society management and security app template designed for gated communities to streamline visitor tracking and community operations. The template includes two dedicated modules: User and Guard. The User module enables residents and administrators to manage visitors, receive notifications, raise maintenance requests, and stay informed about community updates. The Guard module supports security personnel in tracking visitor entries and exits, verifying permissions, and maintaining real-time access logs. Built with a clean interface and scalable architecture, AppsGate provides a reliable foundation for developing secure and efficient residential community management applications.
