

CABBER

Cabber is a professionally designed taxi booking app template built for developing modern ride-hailing and transportation platforms. It connects passengers with nearby drivers through a streamlined booking system, enabling efficient ride requests and real-time trip management. The template includes two dedicated modules: a User module for booking rides, tracking drivers, viewing fare estimates, managing ride history, and completing in-app payments; and a Driver module for handling trip requests, navigating to pickup and drop-off locations, updating ride statuses, and monitoring earnings. Built with a clean, modular, and scalable architecture, Cabber ensures smooth performance, easy customization, and seamless backend integration, making it a reliable foundation for launching feature-rich transportation applications.
