

## CLUBROOM

ClubRoom is a voice-based social networking app template designed for building real-time audio communication platforms. The template enables users to create and join discussion rooms, participate in live voice conversations, manage events, and engage with communities through interactive audio experiences. It includes essential features such as room management, event scheduling, wallet functionality, and microphone controls. Built with a clean, modular architecture and modern user interface, ClubRoom offers easy customization and scalability, providing a strong foundation for developing voice-first social networking and audio community applications.
