

DELIFOOD

DeliFood is a food delivery app template designed for building structured online food ordering, restaurant management, and delivery coordination platforms. It provides a multi-app ecosystem that includes customer, restaurant, and delivery applications, enabling a complete end-to-end workflow for food service operations. Customers can browse menus, customize orders, track deliveries, and manage order history, while restaurants handle menu management and order processing, and delivery agents manage fulfillment. The template includes real-time order tracking, wallet-based payment support, ratings and reviews, and multi-language capability. Built with a clean, modular, and scalable architecture, DeliFood reduces development time and provides a production-ready foundation for food delivery applications.
