

DELIONE

DeliOne is a multi-service on-demand app template designed for building unified platforms that integrate essential daily services. The template supports food ordering, grocery delivery, medicine delivery, cab booking, and e-commerce within a single ecosystem. It includes three dedicated modules: User, Vendor, and Delivery. The User App enables customers to browse services, place orders, track deliveries in real time, and make secure payments via an integrated wallet. The Vendor App allows service providers to manage listings, inventory, and orders, while the Delivery App handles route management and delivery updates. Built with a scalable architecture and clean interface design, DeliOne provides a reliable foundation for developing modern on-demand service applications.
