

NEARGO

NearGo is a location-based discovery app template designed to help users find nearby businesses, services, and local events through an intuitive and map-driven interface. It supports exploration of cafes, gyms, salons, retail stores, and more, with smooth navigation and structured search functionality. The template is built with two dedicated modules: a User module for browsing listings, viewing detailed business profiles, reading reviews, accessing deals, and communicating with vendors; and a Merchant module for managing services, updating listings, posting offers, and handling user interactions. Developed with a clean, modular, and scalable architecture, NearGo ensures high performance, easy customization, and a strong foundation for building modern local discovery platforms.
