

Newshub

NewsHub is a modern news app template designed for building content-driven mobile platforms with a clean and engaging user experience. The template supports features such as category-based content browsing, subscription plans, notifications, bookmarking, and personalized content management. Built with an optimized codebase and scalable architecture, NewsHub enables smooth performance and easy customization for different publishing needs. It provides a reliable foundation for developers, publishers, and startups looking to create responsive news, magazine, blog, or media applications.
