

## PARKSPOT

ParkSpot is a parking management and booking app template designed for building modern parking locator and reservation platforms. The template enables users to search, view, and reserve parking spaces through an integrated map-based interface. It supports detailed listings of parking spots, including pricing, availability, EV charging facilities, surveillance, and overnight parking options. Users can manage bookings, view reservation history, and use an in-built wallet for payments, while operators can list and manage parking spaces. Built with a scalable architecture and clean code structure, ParkSpot provides a reliable foundation for developing parking discovery and booking applications.

### List of Screens
