

QSERVICE

QService is a feature-rich app template designed for building on-demand home service booking platforms that connect users with local professionals such as plumbers, electricians, cleaners, painters, and more. It enables a complete service workflow from discovery to completion, allowing users to search service categories, view provider profiles, book services, track job status in real time, and communicate via in-app messaging. The template includes wallet-based payments, ratings, and reviews to enhance trust and transparency. It features two dedicated modules: a User module for booking and managing services, and a Service Provider module for handling requests, availability, job updates, chats, and earnings. Built with a clean, modular, and scalable architecture, QService ensures high performance, easy customization, and a modern user experience.
