

QUNews

QuNews is a professional news app template designed for delivering real-time updates, trending stories, and curated articles from multiple global sources. It provides a structured reading experience where users can explore content, manage saved stories, and personalize their feed according to preferences. Key features include commenting and reactions, bookmarking, dark mode, multi-language support, preference management, and user account handling. Built with a clean, modular, and scalable architecture, QuNews ensures high performance and easy customization. Its well-organized codebase includes all essential components required to develop and launch a modern, feature-rich news and content aggregation application.
