

SCHOOL BUS TRACKING

Bus Tracking App Template is a complete solution designed to enhance the safety, transparency, and efficiency of school transportation systems. It provides real-time bus tracking capabilities through two dedicated modules: a Parent App and a Driver App. The Parent App enables guardians to monitor live bus locations, receive arrival notifications, and ensure student safety throughout the journey. The Driver App allows drivers to share live location updates, access optimized routes, and communicate with school administrators or parents when needed. Built with a clean, modular, and optimized codebase, the template ensures high performance, smooth cross-device compatibility, and easy customization. Its modern UI and structured architecture make it a reliable foundation for developing scalable school transportation management applications.
