

SERVEBOOK

ServeBook is an app template designed for building local service marketplace platforms that connect customers with professional service providers. It provides a structured foundation for developing on-demand services such as plumbing, electrical work, cleaning, repairs, and general maintenance. The template includes dedicated User and Service Provider applications to support a complete service lifecycle from discovery to completion. Customers can browse service categories, book professionals in real time, and communicate via in-app messaging, while providers manage requests and schedules efficiently. Key features include service discovery, booking management, ratings and reviews, wallet-based payments, and multi-language support. Built with a clean, modular, and scalable architecture, ServeBook enables rapid development of production-ready service marketplace applications.
