

SMARTHOME

SmartHome is a modern mobile app template designed for building smart home automation and IoT device management solutions. The template enables users to control, monitor, and automate connected devices such as lighting systems, air conditioners, music players, security equipment, and other smart appliances from a centralized interface. It includes features for managing multiple rooms and devices, scheduling automated actions, monitoring device status, tracking power usage, and easily adding or removing connected devices. Built with a clean user interface, scalable architecture, and well-structured codebase, SmartHome delivers a seamless user experience while supporting easy customization and backend integration. It serves as a reliable foundation for developing smart home, IoT control, energy management, and connected living applications.
