

SMARTHOUSE

Smart House IoT is a smart home automation app template designed for building connected home management and IoT control platforms. The template enables users to control and monitor home appliances directly from their smartphones through an intuitive interface. It supports remote management of lighting systems, HVAC controls, entertainment devices, and other smart home components. Built with a scalable architecture and optimized code structure, Smart House IoT ensures reliable performance and flexible customization. It provides a strong foundation for developing smart home, energy management, security automation, and connected living applications.
