

## TRUCKSUP

TrucksUp is a comprehensive truck tracking and fleet management app template designed for logistics, transportation, and vehicle monitoring solutions. The template features dedicated Admin and Driver modules that streamline fleet operations, trip management, and real-time vehicle tracking. Administrators can monitor truck locations, create and manage trips, assign drivers, plan routes, access trip history, and oversee vehicle information through a centralized dashboard. Drivers can receive task assignments, view trip details, share live location updates, and submit reports directly within the app. Built with a modern user interface, scalable architecture, and well-structured codebase, TrucksUp delivers reliable performance and serves as a strong foundation for developing transportation, fleet management, and logistics applications of any scale.
