

VROOM

Vroom is a modern ride-sharing and carpooling app template designed for building transportation platforms that connect drivers and passengers for shared travel experiences. The template includes dedicated User and Driver modules, enabling seamless ride booking, trip management, real-time tracking, and communication between riders and drivers. Passengers can book rides, manage payments through an integrated wallet, track journeys, view ride history, chat with drivers, and manage profiles. Drivers can accept ride requests, manage routes and schedules, communicate with passengers, handle wallet transactions, verify profiles, and monitor ride activity. Built with a clean user interface, scalable architecture, and performance-optimized codebase, Vroom provides a reliable foundation for developing ride-sharing, carpooling, and community transportation applications with easy customization and backend integration.
