

Foodoz App Features

Foodoz is a complete online food ordering and delivery platform that connects customers, restaurants, and delivery partners seamlessly. It offers real-time order tracking, secure payments, restaurant management, and multilingual accessibility for modern food delivery experiences.

Tech

Android & iOS development - Ionic

Backend Development - Laravel

Admin Panel Development - Angular

User App

The User App allows customers to explore restaurants, order food online, and track deliveries through an easy-to-use platform.

Features

1. **Multi-Restaurant Food Ordering** – Users can browse multiple restaurants, explore menus, and order favorite meals from nearby food outlets.
 2. **Item in Cart** – Customers can manage selected food items, customize quantities, and review cart details before checkout easily.
 3. **Live Order Tracking** – Real-time tracking helps users monitor food preparation, dispatch status, and delivery progress directly within application.
 4. **Real-Time Chat with Delivery** – Instant messaging enables smooth communication between customers and delivery partners regarding order updates online.
 5. **Add Review** – Customers can share ratings and reviews based on food quality, delivery experience, and restaurant service performance.
 6. **eWallet Integration** – Secure wallet systems support fast digital payments, cashback rewards, and seamless online food transactions securely.
 7. **Send to Bank** – Users can transfer wallet balances and earnings securely to linked bank accounts through integrated systems.
 8. **Dark Mode, Multi-Lingual & RTL** – Supports dark themes, multiple languages, and RTL layouts for enhanced accessibility and better user experiences.
-

Vendor App

The Vendor App helps restaurants manage orders, menus, customer interactions, and business operations from one centralized platform.

Features

1. **New/Past Orders** – Restaurants can manage active and completed food orders through organized operational dashboards efficiently online.
2. **Live Order Tracking** – Vendors can monitor order preparation, dispatch updates, and delivery progress in real time through dashboards.
3. **Chat with Customer/Delivery** – Instant messaging improves communication between restaurants, customers, and delivery partners regarding order activities online.
4. **Detailed Insight** – Analytics dashboards provide insights into restaurant sales, orders, revenue growth, and operational performance clearly online.
5. **eWallet Integration** – Vendors can manage digital payments, wallet balances, earnings, and transaction histories securely through integrated systems.
6. **Send to Bank** – Restaurants can securely transfer wallet earnings and revenue directly to linked business bank accounts online.
7. **Add/Edit Item** – Vendors can create, update, and manage menu items, pricing, descriptions, and food availability instantly online.
8. **Dark Mode, Multi-Lingual & RTL** – Supports dark themes, multiple languages, and RTL layouts for improved restaurant management accessibility worldwide.

Delivery App

The Delivery App helps delivery partners manage deliveries, navigation, earnings, and communication through one powerful platform.

Features

1. **Mark Online/Offline Status** – Delivery partners can manage availability status and receive delivery requests based on working schedules online.
2. **Delivery Task** – Manage assigned delivery tasks, pickup schedules, and customer drop-off activities through organized operational sections easily.
3. **Order Details** – Detailed delivery sections display customer information, ordered items, addresses, and delivery instructions clearly within application.
4. **Navigation to Customer/Vendor** – Integrated navigation provides optimized routes for faster pickups and accurate customer deliveries efficiently online.

5. **Real-Time Chat with Customer/Vendor** – Instant messaging allows smooth communication regarding delivery status, routes, and order-related updates online.
6. **Detailed Insight** – Delivery analytics provide insights into completed deliveries, earnings, ratings, and overall performance statistics clearly online.
7. **eWallet Integration** – Delivery partners can manage wallet balances, digital earnings, and secure payment transactions directly through the application.
8. **Dark Mode, Multi-Lingual & RTL** – Supports dark themes, multiple languages, and RTL layouts for improved delivery management accessibility worldwide.

Admin Panel

The Admin Panel provides centralized control over customers, restaurants, deliveries, payments, and complete platform operations efficiently.

Features

1. **Live Order Status in Map View** – Admins can monitor active food orders and delivery locations through interactive live tracking maps online.
2. **Order Analytics with Graphs** – Visual analytics provide insights into order volumes, revenue growth, and platform performance statistics clearly online.
3. **New Registration Analytics** – Track new customer, restaurant, and delivery partner registrations through advanced analytical reporting dashboards online.
4. **Order Management** – Manage food orders, delivery assignments, restaurant activities, and operational workflows from centralized administration panels efficiently.
5. **Transaction Analytics** – Monitor wallet activities, payments, commissions, refunds, and transaction histories through detailed financial reporting systems.
6. **App Settings** – Configure notifications, permissions, payment methods, and operational preferences through centralized application management dashboards online.
7. **Dark/Light Theme** – Flexible dashboard themes improve administrator visibility and usability during long operational management sessions online efficiently.
8. **Multi-Lingual Including RTL** – Supports multiple languages and RTL layouts for better accessibility across global administrative communities worldwide.
